

JuniorIgnite

Installation & Setup Guide

Welcome! This guide walks you through downloading, installing and setting up JuniorIgnite — the offline school management system for nursery and primary schools. No technical experience is required. You should be running your school in under 15 minutes.

What you need

- A Windows 10 or Windows 11 computer
- About 300 MB of free disk space
- Internet only for the initial download (the app itself runs fully offline)
- Your school details: name, logo (optional), address, and the administrator username & password you want to use

Step 1 — Download the app

1 Open the website

Go to the JuniorIgnite website and click the green "Download for Windows" button on the home page or the Download section.

2 Save the installer

Your browser will download a file named similar to "JuniorIgnite-Setup-1.0.0.exe". Wait for it to finish.

Step 2 — Install JuniorIgnite

1 Run the installer

Double-click the downloaded "JuniorIgnite-Setup" file. If Windows shows a security prompt ("Windows protected your PC"), click "More info" then "Run anyway" — this is normal for new apps.

2 Choose the install location

Accept the default location and click Install. Installation takes about a minute.

3 Launch the app

When installation completes, JuniorIgnite opens automatically. You can also open it any time from the Desktop shortcut or Start menu.

Step 3 — Create your school account

On first launch you will see a short welcome screen, then the setup wizard.

1 Enter your school details

Type your school name, motto (optional), address, region, division and subdivision. Upload your school logo if you have one, and choose your preferred language (English or French).

2 Create the administrator

Choose an administrator username and a password (at least 4 characters). Keep these safe — the administrator has full access to the system.

3 Review and finish

Check your details on the review step and click "Finish setup". The app creates your secure local database and a set of demo classes to get you started.

4 Note your class access codes

After setup, the app shows a code for each class. Teachers use these codes to open their class. Write them down or note them from Settings later.

Step 4 — Start using JuniorIgnite

From the school home screen:

- Administrators click "Administrator login" and sign in to manage students, teachers, classes, marks, fees and settings.
- Teachers click their class card and enter the class access code to take attendance, enter marks and preview report cards for that class only.

Tips for a smooth start

- Add your classes and subjects first, then teachers, then register students into each class.
- Upload student photos from the "Student Photos" tab — they appear on ID cards and report cards.
- Use Settings > Backup regularly to export a safe copy of your data.
- Everything works without internet. Connect only when you want to back up to the cloud or sync.
